

ROTEX® Wood to Metal Conversion

Smart Solutions for Replacing Your
Wood Components with Metal

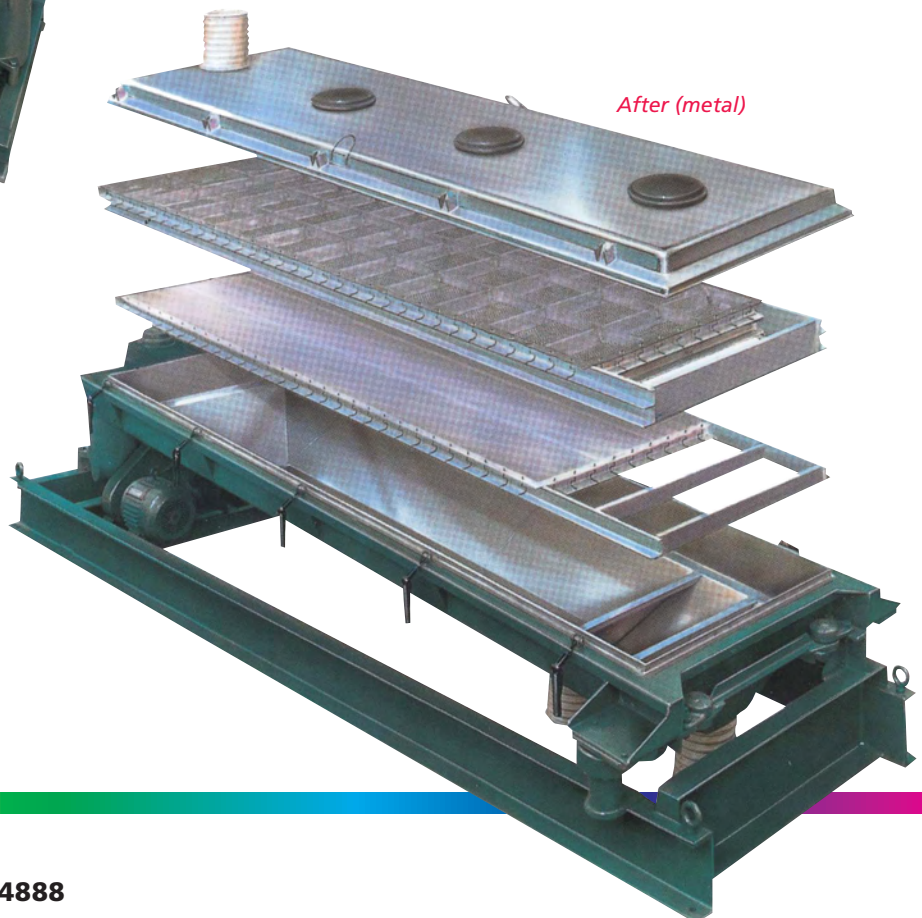

Tel: (513) 541-1236
Web: www.rotex.com

ROTEX has successfully converted machines from wood to metal components in many industries including sugar, salt, food ingredients and fine minerals. These customers are now experiencing improved screening performance and the other benefits of all-metal construction.

Benefits

■ Wood to Metal Conversion

- Converting to all-metal automatic-tensioning screen frames improves efficiency, cleanliness and performance.
- Automatic screen tensioning ensures constant, uniform tension for superior screening accuracy, reduced screen blinding and longer screen life.
- Totally enclosed design and continuous sealing strips prevent contamination and leakage.
- Screen clothing changes are fast and easy, reducing downtime.
- With one-piece design, the automatic-tensioning screen frames are easy to assemble, clean and maintain, greatly simplifying maintenance.

■ Metal Screen Frame

- Features a patented design for attaching screen clothing to screen frames.
- Unique spring-tension clip design facilitates quick screen change and eliminates the need for spare screen frames.
- All components are available in heavy duty mild steel, stainless steel or aluminum.

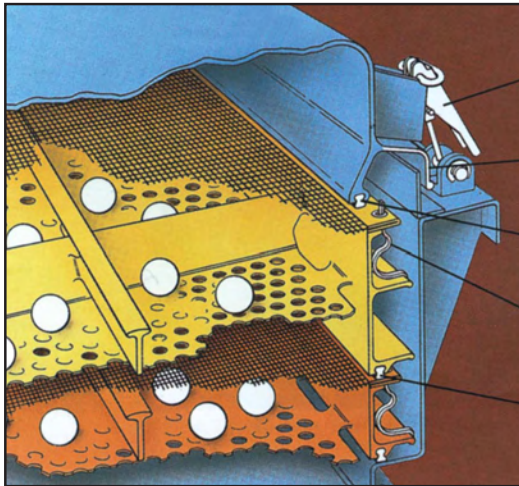

Wood screen frames must be rebuilt and repaired periodically.

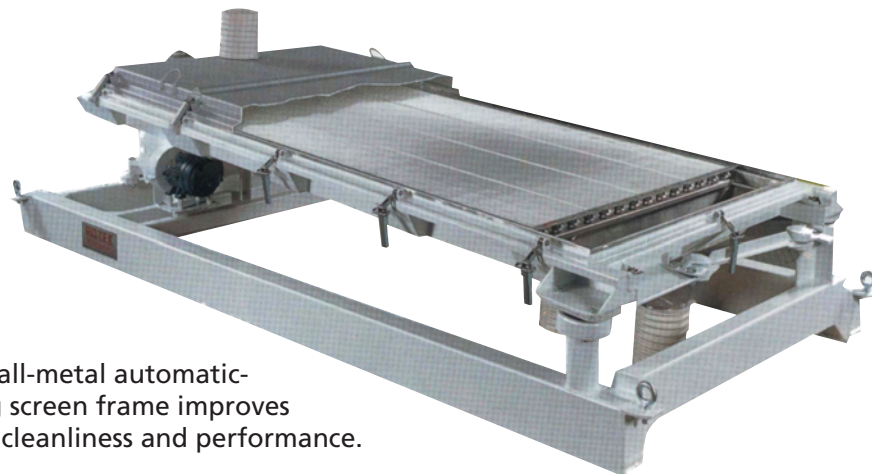

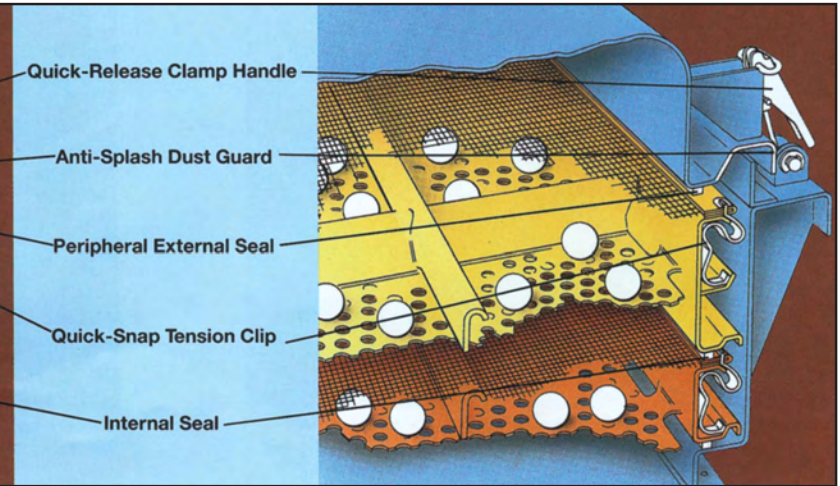

With metal screen frames, changing screens takes just minutes.

Aluminum Top Cover and Screen Frame Construction

Steel Top Cover and Screen Frame Construction

Your new all-metal automatic-tensioning screen frame improves efficiency, cleanliness and performance.
